mailFactory DocumentControl

## Introducing: mailFactory DocumentControl

Ensure your Mail Piece Integrity

### Monitoring the integrity of your mail pieces

Kern's mailFactory DocumentControl is your software solution that provides instructions to Kern high-speed inserting systems. As an expansion of mailFactory Validation, mailFactory DocumentControl enables the active control of processing at the document level. On the basis of the mail-piece ID read on a document, the software issues database-derived instructions to the inserting system, telling it how pages should be collated. Thus the control information for an inserting system can be handled separately from the printed information, which means that it can be revised during the course of production.

Printing addresses on windowless envelopes at the inserting system's exit is just one of the many possibilities offered by database-driven processing. Kern mailFactory DocumentControl ensures the integrity of your mailings by guaranteeing that every mail piece is put together and processed correctly.

### Machine Specifications

mailFactory DocumentControl operates flawlessly with a variety of Kern high speed inserting machines, including the K2500, K3000, K3500, K4000. Other products can be implemented upon request with a mailFactory DocumentControl solution.

mailFactory DocumentControl supports the following readings:

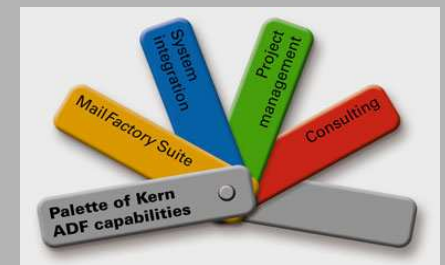

- DataMatrix ECC200
- Barcode 39
- Barcode 2/5 interleaved

### Kern mailFactory

Kern mailFactory is a suite of software products that compliment your production inserting systems and deliver end-to-end production controls from "data to door".

Kern mailFactory, like Kern inserters, is modular, allowing you to choose the components you need today and add and scale your solution as your needs change.

### mailFactory Components

- **mailFactory Manager** – Centralized control for your production operations
- **mailFactory FileManager** – extension to enable control file automation
- **mailFactory Document Control** – intelligent database driven inserting and integrity monitoring
- **mailFactory Reporter** – Powerful and flexible web-based, reporting
- **mailFactory Workplace** – Operator dashboard for mailpiece specific controls
- **mailFactory Validation** – camera based integrity validation
- **mailFactory Output Control** – output to post processing ink jet systems
- **mailFactory Postal Reporter** – Server-based address cleansing (CASS, postal presorting PAVE) and manifest preparation
- **mailFactory PROstream** – Server-based, advanced print stream reengineering enabling barcode changes, control file creation and more.
