mailFactory Media Control

Introducing: mailFactory Media Control Streamlining Mail Processes

Barcode Validation

Delivering mailpieces to the correct person, every time is one of the most important aspects in the mailing industry. With Kern mailFactory Media Control, mailers can guarantee mailpiece integrity through barcode validation and verification. Media Control also helps set up each feed station with the correct inserts by placing scanners on the inserts and/or envelope. If the barcodes do not match the control file, Media Control then prevents the pieces from running.

Kern's mailFactory Media Control is another option for augmenting, monitoring, and control. In addition to the identification of documents, mailFactory Media Control identifies enclosures and envelopes, thus further automating and securing the correct composition of mail pieces.

One Seamless, Automated Process

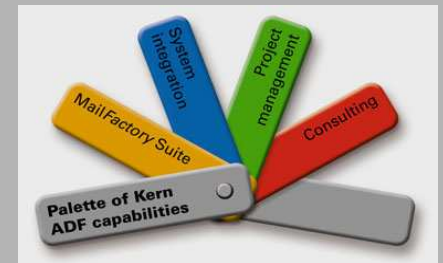

mailFactory Media Control makes complete document component ID control on a job or mail piece level a reality. Unique document component identifiers such as form numbers for main document pages, inserts, envelopes, etc., are downloaded from the mailFactory Manager SQL database and compared to the physical document or insert for complete media control. With mailFactory Media Control you can streamline any individual mailpiece along with your generalized mailpieces into one seamless, automated process.

Kern mailFactory

Kern mailFactory is a suite of software products that compliment your production inserting systems and deliver end-to-end production controls from "data to door".

Kern mailFactory, like Kern inserters, is modular, allowing you to choose the components you need today and add and scale your solution as your needs change.

mailFactory Components

- **mailFactory Manager** – Centralized control for your production operations
- **mailFactory FileManager** – extension to enable control file automation
- **mailFactory Document Control** – intelligent database driven inserting and integrity monitoring
- **mailFactory Reporter** – Powerful and flexible web-based, reporting
- **mailFactory Workplace** – Operator dashboard for mailpiece specific controls
- **mailFactory Validation** – camera based integrity validation
- **mailFactory Output Control** – output to post processing ink jet systems
- **mailFactory Postal Reporter** – Server-based address cleansing (CASS, postal presorting PAVE) and manifest preparation
- **mailFactory PROstream** – Server-based, advanced print stream reengineering enabling barcode changes, control file creation and more.
