

mailFactory OutputControl: Post Production Mail Integrity

Kern mailFactory OutputControl allows mailers to control their mailing fulfillment processes after documents leave the inserting system with integrity, providing continuity in reporting throughout the entire document management process from end-to-end. mailFactory OutputControl is a perfect solution for mailers that want the same level of control over their documents during post production processes that can range from variable data printing to mailpiece sorting.

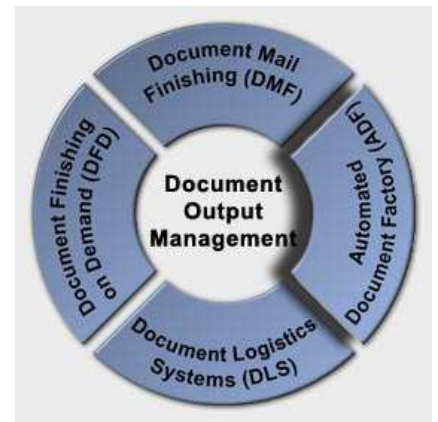

Document Path Reliability

mailFactory OutputControl supports the additional control and functionalities at the output of the inserter. This functionality includes address printing on windowless envelopes within a mailFactory solution. Marketers Information regarding the printing have to be defined in the Control Information. Additional further processes and devices like Bin Stackers, and Post Box Systems will be supported.

OutputControl controls where mail-pieces are diverted to (if not to the main conveyor) and controls printers like the VJ4320 system that we have in place at FMS.

Kern ADF

Kern offers customizable software solutions with the Kern ADF group of products to meet specific customer requirements. Kern mailFactory optimizes the monitoring of processes within a production mail environment from end-to-end.

The success of our customers is the most important part of our business. At Kern, we believe that we don't succeed unless our customers succeed. Fast machines, advanced technology, and outstanding technical support are the fundamental strengths of what we do. By establishing a mutually beneficial partnership, both our customers and Kern are able to achieve success and we back it up with a guarantee.
