

Introducing: mailFactory Reporter Production Performance Reporting

A Web-based package for production details

The software mailFactory Reporter is the module of the mailFactory Suite product family designed to visualize the information of the production. Those data and events are stored and archived by mailFactory Reporter in a central MS-SQL database that is the basis for a variety of analysis and reports. This product allows customer to visualize a record of production or to evaluate the production data with an eye to optimizing internal processes.

mailFactory Reporter supports reports for a variety of interests including:

- Production - Reports about production quantities and status of the job
- Efficiency - Analysis over efficiency and workload of the systems
- Error - Reports and analysis about errors of the systems
- Counters - Analysis of the machine counters including PrimeDoc

Kern mailFactory Reporter is a reporting tool capable of reporting on inserter, operator, job, mailpiece, and mail recovery data. As with all modules, the software interfaces with the mailFactory Manager SQL database for its data needs.

Kern offers 10 pre-defined reports. Additional reports may be developed by the customer utilizing their internal SQL database skills or are available via fee-based professional services.

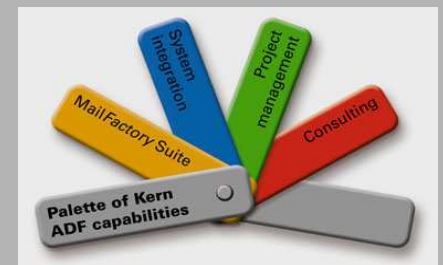

Both inserting systems and the software modules of mailFactory register and record numerous events and items of information. Collected at a central location by mailFactory Reporter, these data serve as the basis for a variety of evaluations. Because the implementation of mailFactory Reporter is open-ended, the possibilities for generating reports are virtually unlimited. Reports can be classified according to time periods, jobs, machines or operators. With mailFactory Reporter you can continually monitor and improve production performance.

Kern mailFactory

Kern mailFactory is a suite of software products that compliment your production inserting systems and deliver end-to-end production controls from "data to door".

Kern mailFactory, like Kern inserters, is modular, allowing you to choose the components you need today and add and scale your solution as your needs change.

mailFactory Components

- **mailFactory Manager** – Centralized control for your production operations
- **mailFactory FileManager** – extension to enable control file automation
- **mailFactory Document Control** – intelligent database driven inserting and integrity monitoring
- **mailFactory Reporter** – Powerful and flexible web-based, reporting
- **mailFactory Workplace** – Operator dashboard for mailpiece specific controls
- **mailFactory Validation** – camera based integrity validation
- **mailFactory Output Control** – output to post processing ink jet systems
- **mailFactory Postal Reporter** – Server-based address cleansing (CASS, postal presorting PAVE) and manifest preparation
- **mailFactory PROstream** – Server-based, advanced print stream reengineering enabling barcode changes, control file creation and more.
